

SIM Sentinel™

Mobile SIM and APN management

What is SIM Sentinel™?

SIM Sentinel™ is an Enterprise ready, network network agnostic software-as-a-service solution that provides a host of management related features and benefits that assist your business monitor, administer and maintain its mobile SIM and/or private APN environment, across thousands of SIMs.

BENEFITS

1 Manage multiple APNs on any carrier network whether they are forward or reverse billed.

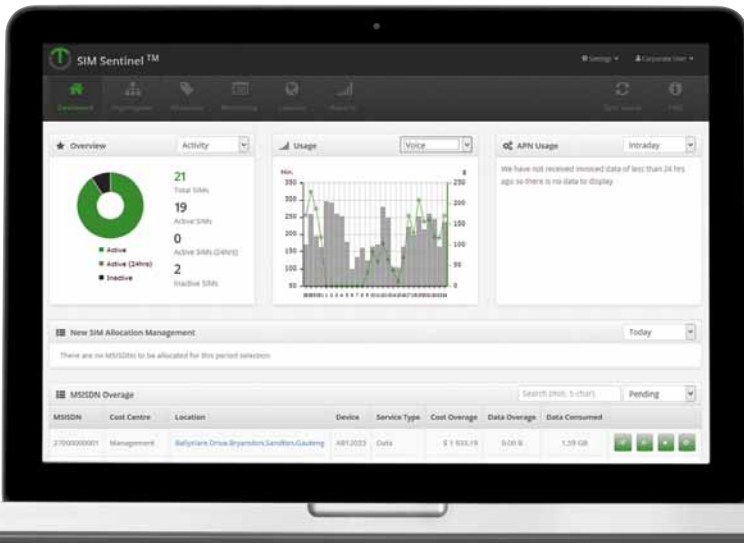

2 Manage devices and their associated MSISDNs according to your preferred organisational structure, assisting in department oversight and ease of reporting.

3 Prevent abuse and bill shock through automated threshold oversight and alerts.

4 Manage SIMs by giving users administrative oversight of their SIM environment.

5 Manage assets by keeping track of where your devices are located through the use of location based services.

6 Review usage and costs through our on demand or scheduled suite of reports.

FEATURES

SIM/APN MANAGEMENT

Oversight and control of devices and their associated MSISDNs is difficult. SIM Sentinel™ uses the businesses organisational structure to monitor, manage and report on usage.

EXPENSE MANAGEMENT

Month end means you receive an invoice that, in most cases is accepted and paid in blind faith. SIM Sentinel™ provides oversight on day-to-day consumption and costs.

GLOBAL LOCATION MANAGEMENT

Locating devices can be like finding a needle in a haystack. SIM Sentinel™ enables you to triangulate your devices by making use of location based services.

DEVICE ANALYTICS **NEW**

Unlock insights from the data sent by your device. SIM Sentinel™ now offers you the ability to receive, analyse and present your data.

PRE-PAID **NEW**

Managing pre-paid SIMs in the field is a time consuming task. SIM Sentinel™ offers you the ability to control your pre-paid SIM environment including enabling top-ups.

CONTRACT MANAGEMENT

Contract management requires continuous management. SIM Sentinel™ assists in this task by providing you with the appropriate tools designed to aid you in gaining this oversight.

WHAT WE DELIVER

1 Claritech offers a hosted (SaaS) or on-site solution. The solution is compatible with any web browser.

2 Claritech can offer full system oversight, upgrades and management throughout the client engagement period.

3 **NEW** Claritech offers a resale option to those managing or providing connectivity to third parties for insight into their environment.

PLAN OPTIONS

HOSTED (SaaS)

Cloud-based solutions are fast to get started, secure and are a cost effective way to scale as your company grows. By eliminating the need to install and run software in-house, you don't have the burden and expense of software maintenance or running your own server infrastructure.

- Fast, secure and scales as your company grows.
- No server hardware or up-front capital investment.
- Eliminates the need to install, run and maintain software in-house.
- Perfect for organizations that don't want to implement an in-house solution.

ONSITE

OnSite solutions are licensed, installed and managed by your team. Because they are installed on your own SQL server(s), you get a flexible solution that can be easily configured to your specific business operations. OnSite is best for companies who have the resources to manage an in-house solution.

- Licensed, installed and maintained by your team.
- Implemented on-site and installed on your own SQL Server(s).
- Can be configured to suit your business needs.
- Best for companies who have the resources and infrastructure to manage an in-house solution.
